My business deals with equipping table saws with safety products. The guard I make was developed out of our necessity to prevent kickbacks when I was ripping 2x4s to build shooting houses. In the last few months, I have had many recommendations from a certain government agency that I can't name. I'm not allowed to per their website. To be short, a lot of potential customers with certain models of table saws have wanted guards and riving knives for them. Some of the older table saws can accept riving knives but didn't come with them originally. Customers prefer an adjustable riving knife over a fixed position splitter. I can develop riving knives for a lot of saws, already have for some, but I would prefer to see the table saw in person. Below is a list of table saws I would like to look at. Any help would be appreciated. I would prefer the saw to be in central or South Bama or NW Florida. There are also some saws I sell a lot of guards for and would like to make a video of the installation process. Anyone who can assist me in this will get a free installed guard and splitter or riving knife for their table saw. PM me if you are interested in helping out. Thanks a bunch.
